

Me Oh Maya

About the Show

A basketball game gets interrupted and the boys find themselves in Chichen Itza, Mexico, in the middle of a Mayan ringball court a thousand years ago! Of course in this game, the stakes are a little higher because if they lose, they lose their heads!

Introduction

Mayan culture, like other ancient civilizations, fascinates students. You can use this lesson in conjunction with any study of ancient cultures and to compare and contrast what was happening in the Americas and Europe during this time.

Historical Background

The Maya are probably the best-known of the ancient civilizations of Mesoamerica. Originating in the Yucatán around 2600 B.C.E, they rose to prominence around 250 C.E. in present-day southern Mexico, Guatemala, northern Belize, and western Honduras. The Maya developed astronomy, mathematics, art, architecture, calendars, and hieroglyphic writing. They were also skilled farmers, weavers, potters, and traders.

Chichen Itza was the last of the great Mayan cities built during the period of Mayan dominance in Mesoamerica. By the middle of the 9th century, it had become one of the leading political and economic centers of the region. How long its hegemony lasted is unclear. Archaeologists once believed it lasted until the 12th century, but evidence now indicates a shift before 1000 that might have marked the beginning of the decline. ("Me Oh Maya" is set in 960 C.E.) The collapse of the Mayan civilization is one of the great mysteries of history.

- social studies

Me Oh Maya

Historical Background *continued*

As in other cultures, the Maya used personal appearance, clothing, and adornments to indicate social status. Body paint was often used to mark special groups.

The fact that the Maya played ball games is known from archeological evidence and carvings. Although the games may have been played informally, the more formal version featured a specially constructed ball court. The size of the playing area varied from court to court, but the largest known court, the Great Ball Court at Chichen Itza, was about the size of a football field. In addition to being played for sport, the Maya ball game was also closely associated with religious rituals and beliefs.

There are about six million Maya today living in Mexico, Guatemala, and Belize. Each of the 31 Maya groups throughout Central America speaks a different, though related, language.

Put It Back, Jack! and other interactive games to play.

Plentifax 487—the ultimate time traveler's guide—gives facts about the way the Mayan people lived, and more!

Cool Books that kids will love.

Activity 1

Basketball Rules

In this activity, students first create a Venn diagram comparing something familiar (home and school). They then use a Venn diagram to compare Mayan ring-ball and American basketball.

Instructions

1. Explain that the Venn diagram is a graphic organizer that can be used to compare the similarities and differences between two things. Set up two intersecting rings on the floor with the yarn or string.
2. Ask a volunteer to write "HOME" on one sentence strip and "SCHOOL" on another strip with a marker. Have a volunteer place one strip at the top of each circle.
3. Ask the class to brainstorm characteristics of school and home. Have students write their responses on sentence strips. Answers may include *adults, eating, rooms, books, getting dressed, sleeping, allowance, homework, teachers, tests, parents*.
4. Have students place their sentence strips in the appropriate part of the diagram. The common characteristics should go in the overlapping section.
5. Discuss the results with the students. How does the Venn diagram help demonstrate the differences and similarities of home and school?
6. Organize students into pairs or groups. Tell them that they are going to create their own Venn diagram to compare Mayan ring-ball and American basketball. They will need to research the characteristics of each sport.
7. Have partners or groups share their diagrams with the class. You might want to make a whole-class Venn diagram to see how many similarities and differences students were able to find.

Objectives

- to draw inferences
- to compare and contrast attributes and characteristics
- to practice research skills
- to distinguish between similar and dissimilar characteristics
- to understand a Venn diagram

Materials

- 2 different colors of string or yarn and matching markers
- large sentence strips

Curriculum Standards

- **NCSS**
Culture: Students explain why individuals and groups respond differently to their physical and social environments and/or changes to them on the basis of shared assumptions, values, and beliefs.
- **NCTE/IRA**
Students conduct research on issues and interests by generating ideas and questions and by posing problems.

Activity 2

Headlines!

By writing a newspaper article for the fictitious *Mayan News*, students familiarize themselves with journalism and how to write headlines.

Instructions

1. Explain that headline editors, not reporters, often write newspaper headlines. Have students pretend that they are headline editors for the *Mayan News*. Their words, or glyphs, will be read by thousands of sports fans. (If possible, display a map of the Mayan empire and point out the vast circulation area of the *Mayan News*.)
2. Have students bring in sports sections from different newspapers. Ask students to read examples of sports headlines. What strong verbs have the writers used? (Possible examples include: *annihilates*, *clobbers*, *crushes*, *destroys*, *routs*, *soars past*, *squeaks by*, *tramples*, *triumphs over*, *trounces*.) You may want to brainstorm additional examples.
3. Have the class create a word splash of strong verbs. Then, have partners create a headline for the ring-ball game. Encourage the student journalists to share their headlines with the class.

Take It Further

Students can translate their headlines into the Mayan language (see Resources). Students can also write their own account of the game (or an imagined game) to accompany their headline.

Objectives

- to improve writing by using strong verbs
- to become familiar with journalism

Materials

- newspapers
- map of the Mayan empire (optional)

Curriculum Standards

- NCSS
Time, Continuity, and Change:
Students identify and use processes important to reconstructing and reinterpreting the past.
- NCTE/IRA
Students use a variety of technological and informational resources (e.g. libraries, databases, computer networks, video) to gather and synthesize information and to create and communicate knowledge.
